# FRONTeO e-Banking

FRONTeO e-Banking is a multichannel **web, mobile** and **tablet** solution, developed for retail and corporate banks, allowing your private and business customers to manage their financial situation and execute transactions anytime and anywhere using their preferred device (computer, smartphone, tablet, etc.).

FRONTeO e-Banking comes with a series of integrated ready-to-plug functionalities such as the management of **Accounts, Payments, Beneficiaries, Investments, Loans, Insurances, Simulation tools,** etc.
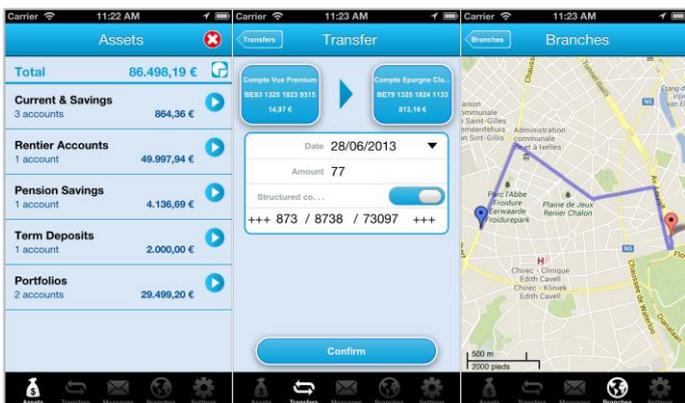

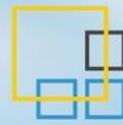

Users can fully personalize their **preferences** and thanks to the **secured mail** module it is possible to exchange information in both directions (user to bank / bank to user). The solution also comes with customizable **SMS** and **e-mail alerts**.

Thanks to its **Service Oriented Architecture** (SOA) **FRONTeO e-Banking** can easily be connected to and integrated with **Digital Marketing Systems** (DMS) and **Content Management Systems** (CMS). The solution allows banks to realize important gains due to its impressive time-to-market possibilities. Moreover, the most rigorous **security** features have been implemented using state-of-the-art tools and frameworks. External audits and intrusion tests confirm the highest level of security implementation.

By installing **FRONTeO e-Banking**, banks benefit from a numerous series of advantages: the solution can be connected to all back-office systems, is multilingual, modular, SOA based, user friendly, available 24/7, evolutive and scalable.

Finally, **FRONTeO** has been developed using market standards, allowing to reduce significantly the total cost of ownership (TOC).
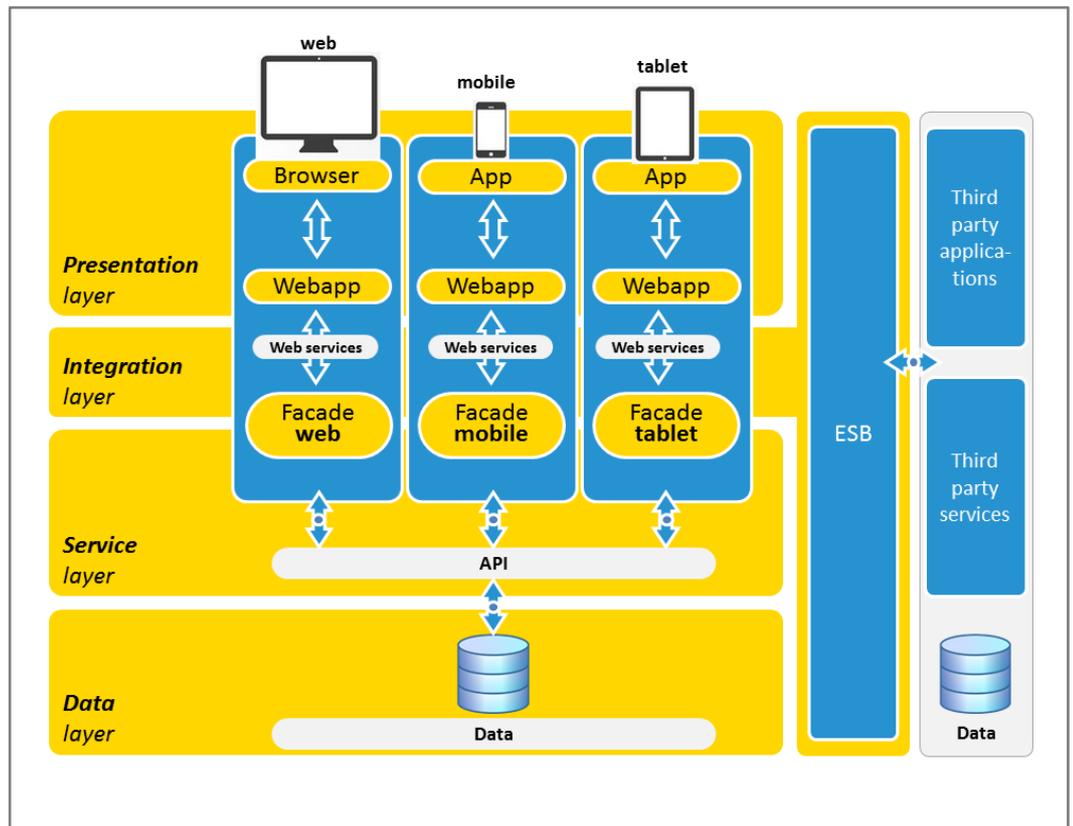

A modern architecture

FRONTeO e-Banking is built around a series of standard components.

The business logic is contained in the *Service layer* and is exposed to the *Presentation layer* through the **Web services**.

The Web services can be channel dependent: a facade for the **web**, another for the **mobile**, and another for the **tablet**.

Diagram labels: web / mobile / tablet — Browser, App, App — Presentation layer — Webapp, Webapp, Webapp — Integration layer — Web services, Web services, Web services — Facade web, Facade mobile, Facade tablet — Service layer — API — Data layer — Data — ESB — Third party applications — Third party services — Data
