

## FRONTeO Branch

**FRONTeO Branch** is a global and modular **front & middle office** solution covering all banking services and specifically designed for the needs of the branches network. The functional coverage includes modules that are designed as discrete functional reusable components, allowing banks to be more productive, reduce costs and improve the quality of their services.

### Content of the modules

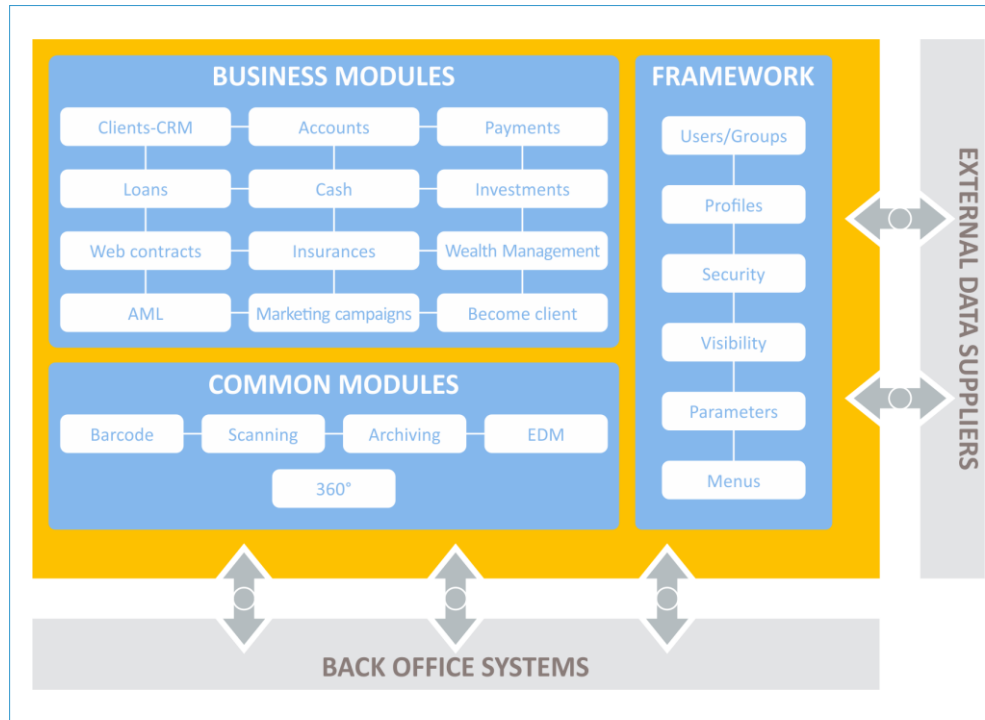

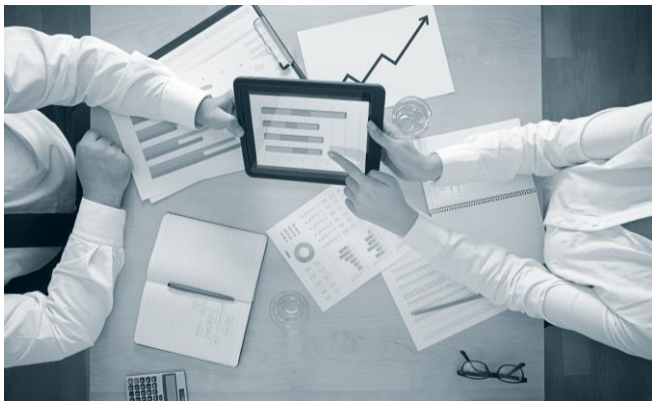

**Client management:** Customer Information File (CIF) registry, customer relationship functionalities, 360° client view,...

**Accounts:** Current and savings account management, term deposits, statements, history, management of mandates and proxies,...

**Payments:** SEPA and international (non-EU) payments, standing orders, direct debits, cheques, debit and credit cards, pending transaction management tools,...

**Loans:** Management of the loan acquisition process for consumer loans, installment loans, mortgage loans, investment credits, commercial loans, term advances, revolving credits and leasing, including advanced scoring and simulation tools.

**Cash:** Cash deposits, withdrawals, buy/sell Forex, cash journals, cash balances and stock management, teller management...

**Investments:** Management of portfolio, buy/sell funds and certificates, securities management tools, global portfolio view and transactions history.

**Web contracts:** Management of web contracts, (multi-) signing authorities, authentication, authorizations and delegations.

**Wealth Management:** Standardization and automation of the complete investment advisory process.

**AML:** Advanced tools for managing the anti-money-laundering alerts.

**Marketing campaigns:** Integrated management of marketing actions, including the management of client alerts, to do lists,...

**Become client:** Follow-up and management of the become client requests initiated through the public website.

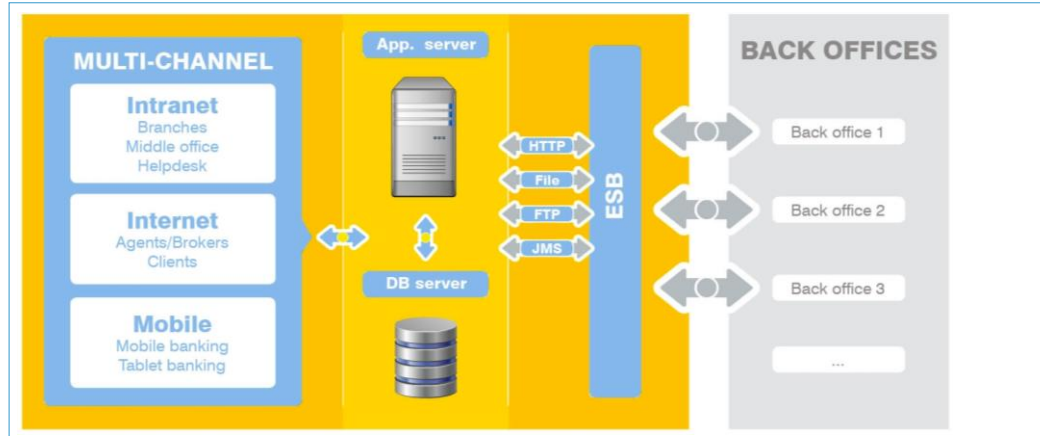

## A modern architecture

**A browser:** the multi-channel client uses CSS allowing to align the GUI with the look and feel of the financial institution.

**An application server:** This component contains the business logic.

**A database server:** All front office data are stored in **FRONTeO**'s database.

**FRONTeO** is built around a 3-tier technical architecture:

By installing **FRONTeO**, a financial institution benefits from numerous advantages: the solution can be connected to any back-office system, is multilingual, modular, SOA based, user friendly, scalable and offers **excellent reporting possibilities**. Moreover, **FRONTeO** has been developed using market standards, significantly reducing the total cost of ownership (TCO).
